X=present or max at one time:

1=1 bird

2=2-10 birds

3=11-100 birds

4=101-1,000 birds

5=more than 1,000 birds

Semimonthly Checklist Data Sheet A. Year: 200__ Observer(s):_____ Location:____

Try to observe at least 30-60 minutes/week. Please mark records for each bird species that you see or hear each semimonth by an "X" or by the maximum number of birds you estimate seeing or hearing at one time (do not add birds from more than one observation) using the 1-5 abundance scale. If you use the 1-5 scale, it may be easiest to record the abundance class for a species the first time it is noted, and then revise the abundance if more are noted at one time later during the semimonthly period. Using "X" is fine, and you can mix using "X" or the 1-5 scale for the same or different species. The goal is for observers to keep records, so use whatever works for you! Records for part of a year are useful, too!

Write comments or counts of species of interest on back of this sheet or in a journal. If you see a <u>rare</u> or <u>rare unseasonal</u> species, please write down details useful to document a bird's identity and photograph it, if possible. For suggestions for public areas to monitor, more forms, results, and "Details Needed to Document Rare or Rare Unseasonal Birds." see http://www.orednet.org/~rbayer/semi.htm (all lower case letters).
